Login

The Betfair API offers three login flows for developers, depending on the use case of your application:

- **Non-Interactive login** - if you are building an application that will run autonomously, there is a separate login flow to follow to ensure your account remains secure.
- **Interactive login** - if you are building an application that will be used interactively, then this is the flow for you. This flow has two variants:
 - **Interactive login - API method** - This flow makes use of a JSON API Endpoint and is the simplest way to get started if you are looking to create your own login form.
 - **Interactive login - Desktop Application** - This login flow makes use of Betfair's login pages and allows your app to gracefully handle all errors and re-directions in the same way as the Betfair website

Request Headers

- All requests must include a HTTP header named **"X-Application"** containing the [Application Key](#) assigned to you.
- All requests must include a HTTP header **"X-Authentication"** containing your [sessionToken](#).
- All requests must include a HTTP header **"Accept"** with the value [application/json](#)

Please note: The only exceptions to the above are some of the [Account Operations](#) ([Vendor API](#)) which require the **X-Authentication** HTTP header only.

You can call the API at one of two endpoints, depending on which style of request you want to use.

API Endpoints

You can make requests and place bets on UK & international markets by accessing the Global Exchange via the following endpoints.

All API requests should be sent as **POST**.

Betting API

Please find the details for the current **Betting API** endpoints:

Global Exchange

Interface	Endpoint	JSON-RPC Prefix	<method> Example
JSON-RPC	https://api.betfair.com/exchange/betting/json-rpc/v1	<method>	SportsAPING/v1.0
JSON REST	https://api.betfair.com/exchange/betting/rest/v1.0/		listMarketBook/

Account API

You can make requests for your UK Exchange wallet information by accessing the Global Exchange via the following endpoints.

Please find the details for the current **Accounts API** endpoints:

Global Exchange

Interface	Endpoint	JSON-RPC Prefix	<method> Example
JSON-RPC	https://api.betfair.com/exchange/account/json-rpc/v1	<method>	AccountAPING/v1.0
JSON REST	https://api.betfair.com/exchange/account/rest/v1.0		getAccountFunds

Spanish & Italian Exchange

Please see separate documentation for the [Spanish](#) & [Italian](#) Exchange

JSON

You can POST a request to the API at:

<https://api.betfair.com/exchange/betting/rest/v1.0/<operation name>>. So, to call the `listEventTypes` method, you would POST to:

<https://api.betfair.com/exchange/betting/rest/v1.0/listEventTypes/>

The POST data contains the request parameters. For `listEventTypes`, the only required parameter is a filter to select markets. You can pass an empty filter to select all markets, in which case `listEventTypes` returns the `EventTypes` associated with all available markets.

JSON POST Data

```
{
  "filter" : { }
}
```

Python Example JSON Request

```
import requests
import json

endpoint = "https://api.betfair.com/exchange/betting/rest/v1.0/"

header = { 'X-Application' : 'APP_KEY_HERE', 'X-Authentication' : 'SESSION_TOKEN_HERE' , 'content-type' : 'application/json' }

json_req='{"filter":{ } }'

url = endpoint + "listEventTypes/"

response = requests.post(url, data=json_req, headers=header)

print json.dumps(json.loads(response.text), indent=3)
```

JSON-RPC

You can POST a request to the API using [JSON-RPC](#) at:

<https://api.betfair.com/exchange/betting/json-rpc/v1>

The POST data should contain a valid JSON-RPC formatted request where the "params" field contains the request parameters and the "method" field contains the API method you are calling, specified like "SportsAPING/v1.0/<operation name>".

For example, if you were calling the [listCompetitions](#) operation and passing in a filter to find all markets with a corresponding event type id of 1 (i.e., all Football markets), the POST data for the JSON-RPC endpoint would be:

Example JSON-RPC POST data

```
{
  "params": {
    "filter": {
      "eventTypeId": 1
    }
  },
  "jsonrpc": "2.0",
  "method": "SportsAPING/v1.0/listCompetitions",
  "id": 1
}
```

Here's a quick example Python program that uses JSON-RPC and returns the list of EventTypes (Sports) available:

JSON-RPC Python Example

```
import requests
import json

url="https://api.betfair.com/exchange/betting/json-rpc/v1"
header = { 'X-Application' : 'APP_KEY_HERE', 'X-Authentication' : 'SESSION_TOKEN' , 'content-type'

jsonrpc_req='{"jsonrpc": "2.0", "method": "SportsAPING/v1.0/listEventTypes", "params": {"filter":

response = requests.post(url, data=jsonrpc_req, headers=header)

print json.dumps(json.loads(response.text), indent=3)
```

And the response from the above:

```

Request a List of Football Competitions

To retrieve all football competitions, you can make a request to the [listCompetitions](#) operation with the following market filter:

listCompetitions Request

```

{
  "params": {
    "filter": {
      "eventTypeId": [1]
    }
  },
  "jsonrpc": "2.0",
  "method": "SportsAPING/v1.0/listCompetitions",
  "id": 1
}

```

The "filter" selects all markets that have an eventTypeId of 1 (which is the event type for Football).

Then returns a list of Competitions and their Ids and how many markets are in each competition which are associated with those markets:

Sample Code, Client Libraries & Tutorials

As well as sample code developed by Betfair, this page allows you to find sample code or documentation prepared by members of the Developer Program community.

✔ If you would like to contribute to this space, please contact [Developer Support](#)

① All **Betfair-developed** sample code follows a typical workflow:

- Find the next UK Horse Racing Win market
- Get prices for the market
- Place a bet on the market
- Handle the error returned by the API when the bet fails as it is below the minimum stake size.

Please Note: In order to aid ease of understanding, the basic Betfair samples are not intended to show certain best practices for speed and throughput. Well-designed applications should follow the best practices for client design of the application/language platform and should optimise on an HTTP request level with features such as requesting gzip'd responses and http connection keep alives. Please see [Optimizing API Application Performance](#) for further details.
